Veneers (Same Day)

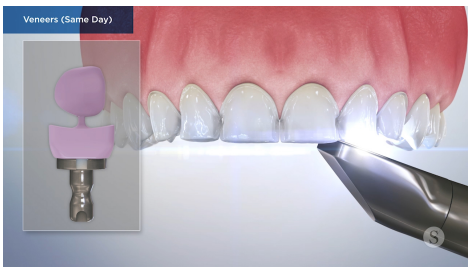

Veneers are custom-made coverings that fit over the front surfaces of teeth and can significantly improve the appearance of your smile.

Your doctor may recommend veneers if your teeth are cracked, chipped, stained, or have other imperfections.

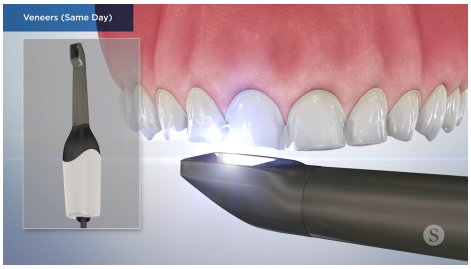

Veneers help restore your teeth's shape, function, and appearance.

And, with digital technology, They can be custom fabricated while you wait.

First, a numbing agent is applied to the area, and the teeth are prepared.

Then, using an intraoral scanner, the prepared teeth are imaged to aid your doctor in designing the veneers.

When your veneers are ready, your doctor makes final adjustments and bonds them into place.

Once completed, your teeth are restored to optimal shape, function, and appearance.
